

Do You Know How Clean Your Medical Facility Truly Is?

We Can Help You Uncover the Truth!

For a **Limited Time**, Bee Line Support is Offering a **FREE Black Light Audit** of Your Facility!

Find out why Advocate Medical Group, Silver Cross Hospital & Surgical Care Affiliates all trust Bee Line Support as their first line of defense!

The Black Light Auditing Process

When completing an audit, we utilize the VeriClean system, a state-of-the-art fluorescent auditing tool. The process looks like this:

1. Our auditor will apply an invisible spray to all high touch points throughout the room.
2. We will leave and let your cleaning crew proceed as they normally would.
3. Once they are through cleaning, we will return with an auditing tool that will show and track whether the high touch points were cleaned fully or not.
4. We can record all results through an electronic dashboard, and present you with the results of our examination.

Bee Line Support's Standards

We are one of the few comprehensive cleaning companies to use Black Light auditing to ensure total disinfection of all surgery terminals. We train all cleaning staff about high-touch points and how to properly clean them in a surgery setting. Through in-depth review and monitoring, we can guarantee that your space has been left spotless.
