

What is a CMIP Certified Manager?

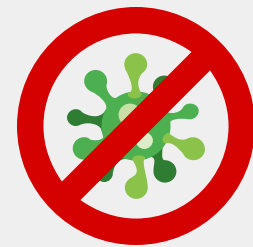

What it Means

CMIP stands for "Certificate of Mastery in Infection Prevention" and is a rigorous three-phase certification program that provides graduates with the comprehensive ability to facilitate infection prevention care to all clinical environments. They are also taught the necessary tools to train cleaning staff on infection prevention, as well as how to audit and monitor a space's cleanliness.

What They Know

CMIP Managers are taught the ins-and-outs of all types of microorganisms, such as viruses, bacteria, fungi, and pathogens, as well as types of chemicals, and how to apply chemicals to make pathogens disappear.

Why They're Important

With their extensive knowledge in microorganisms, CMIP managers are *vital* to have on your cleaning staff, as they can teach their teams the best methods for applying and setting cleaning solutions in order to most effectively sanitize a space. They also educate on a wide-range of precautionary measures, including:

- o Hand hygiene
- o Cleaning High Touch Surfaces
- o Use of Personal Protective Equipment
- o Respiratory Hygiene
- o Hazardous waste handling
- o Environmental Awareness
